Paris Action Climat Contact

 Grégoire Cojan

“IF THE TRACK OF + 2 ° C IS NOT RESPECTED 50% OF ARABICA'S PRODUCTION AREAS COULD DISAPPEAR BY 2050.”

The quality and production of coffee is very dependent on weather conditions. The climate strategy is at the heart of Nespresso's concerns to mitigate the effects of climate change and adapt farms to this change. Beyond agricultural production, the entire value chain is concerned.

Between 2009 and 2013, the Nespresso group reduced the carbon footprint by 20% per cup of coffee consumed thanks to the eco-efficiency of the machines and the recycling of capsules.

The goal is to reduce the carbon footprint by another 10% by 2020 (Baseline 2009).

In order to materialize the positive impact of the company, Nespresso France invests annually more than 1.5 M € since 2016, to compensate the residual carbon footprint of each cup consumed and to offer 100% carbon neutral coffee.
